AEBACKOFFICE
Making Sure You Stay Connected

Making sure your data is secure and available with AEB's Backup and Recovery Management.

AEBackOffice technique involving Backup and Recovery Management successfully approaches and results even the most demanding service levels of recovery. The maintenance of IT infrastructures is one of the worlds most demanding services organizations ask for.

The data revolution has forced a massive evolution in the way businesses, both big and small, keep operating even in the event of an outage or disaster. Most corporation executives today find themselves having to come up with solutions in case of an disaster which causes an outage. However most solutions and recovery tools, that are used as a quick fix, are often outdated since the IT infrastructure is ever changing with each passing year.

Service Overview

The Backup and Recovery Management practice at AEB has an extensive procedure when it comes to securing the availability and recovery of data. Using updated and improved methods we aggressively seek to make our client's recovery times shorter so they can keep their businesses up and running. Our method first involves a system and application analysis in order to ensure their availability is aligned with the established recovery time objective (RTO). AEB vendor-agnostic procedure is backed by boundless industry knowledge of availability and recovery solution tools. The result is an exacting focus on service levels given this broad understanding and an ability to lessen data loss. AEB sets combative recovery point objectives (RPO) to improve data availability.

The increasing demands of today often to other priorities first among IT organizations which keeps them from administering any necessary attention, resources and expertise on their ongoing and evolving business continuity needs. AEB plans to take over that worry and combat this challenge by applying all necessary processes. In order to determine which tools are correct for our client, we do individual site surveys to understand the IT environment as well as to understand how big of an impact an outage would have on the organization. Working with the client's IT team, AEB ensures that the management objectives are reflected accurately to their needs. Making sure all service is high quality, AEB makes sure the service levels are met across the entire infrastructure.

Helping our clients discover and possess the unlimited capability of being effectively connect to the world.
